

SQL database in Microsoft Fabric

Series Scenario – Conference session application

You need:

- to store and serve data for the conference webpage.
- to be able to run analysis over the data.
- an application that allows attendees to easily search for and find sessions of interest to them.
- to follow modern best practices for application lifecycle.
- to be able to monitor and troubleshoot database and query performance.

Course Overview and agenda

Episode 1: Introduction and Overview; Getting started

Episode 2: Dataflows, Notebooks, Reports

Episode 3: GenAI and vector databases

Episode 4: GraphQL and application development

Episode 5: Application lifecycle management

Episode 6: Performance Dashboard, Recap

Focus on building your app

A simple, integrated developer experience

- Easy provisioning
- AI assistance
- Integrations from the editor
- T-SQL support

The screenshot displays the Microsoft SQL Server Data Studio interface. The top menu bar includes 'Home', 'Replication', and 'Security'. Below the menu, there are icons for 'Get data', 'New Query', 'Templates', 'Open in', 'New API for GraphQL', 'Performance summary', and 'Copilot'. The left sidebar, titled 'Explorer', shows a tree view of the database structure: 'ContosoDB' > 'dbo' > 'Tables'. A list of tables is shown, including 'AuditLogs', 'Billing', 'ChatSummary', 'CustomerActivity', 'Customers', 'Employee', 'Inventory', 'OrderDetails', 'Orders', 'Payments', and 'Plans'. The main area, titled 'Data preview - Products', shows a table with 18 rows and 8 columns: 'ProductID', 'ProductName', 'Description', 'Price', 'Category', and 'StockQuantity'. The table is filtered to show 1000 rows. A status bar at the bottom indicates 'Succeeded (3 sec 17 ms)'.

Microsoft Fabric capacity model

Microsoft Fabric is a unified product for all your data and analytics workloads. Rather than provisioning and managing separate compute for each workload, with Microsoft Fabric, your bill is determined by two variables: the amount of compute you provision and the amount of storage you use.

COMPUTE

A shared pool of capacity that powers all capabilities in Microsoft Fabric.

Pay-as-you-go and 1-year Reservation.

STORAGE

A single place to store all data.

Pay-as-you-go (\$ per GB/month).

SQL database in Fabric is a **game-changer**

"The ability to automatically replicate data for near-real-time analytics while maintaining a simple and intuitive management experience is a **game-changer**.

This integration not only enhances our ability to derive insights quickly but also streamlines our data operations, reducing overhead and boosting productivity ... SQLDB in Fabric just works!

Ian Santillan
Data Architect

Save the Children

"I'm excited about the unification of transactional and analytical data within Fabric SQL DB. This has been a **game-changer** for us, allowing us to manage large-scale Finance Management System (FMS) data without the complexity of traditional ETL processes.

The new capabilities have reduced rework of our processes and provided faster, more reliable insights, helping us be more responsive and impactful in our mission to improve children's lives globally."

Tariq Bhatti
Data Warehouse and BI Architect

Autonomous and secure

Autonomous capabilities manage your workloads

Challenge

Making the right choices and managing databases is complex.

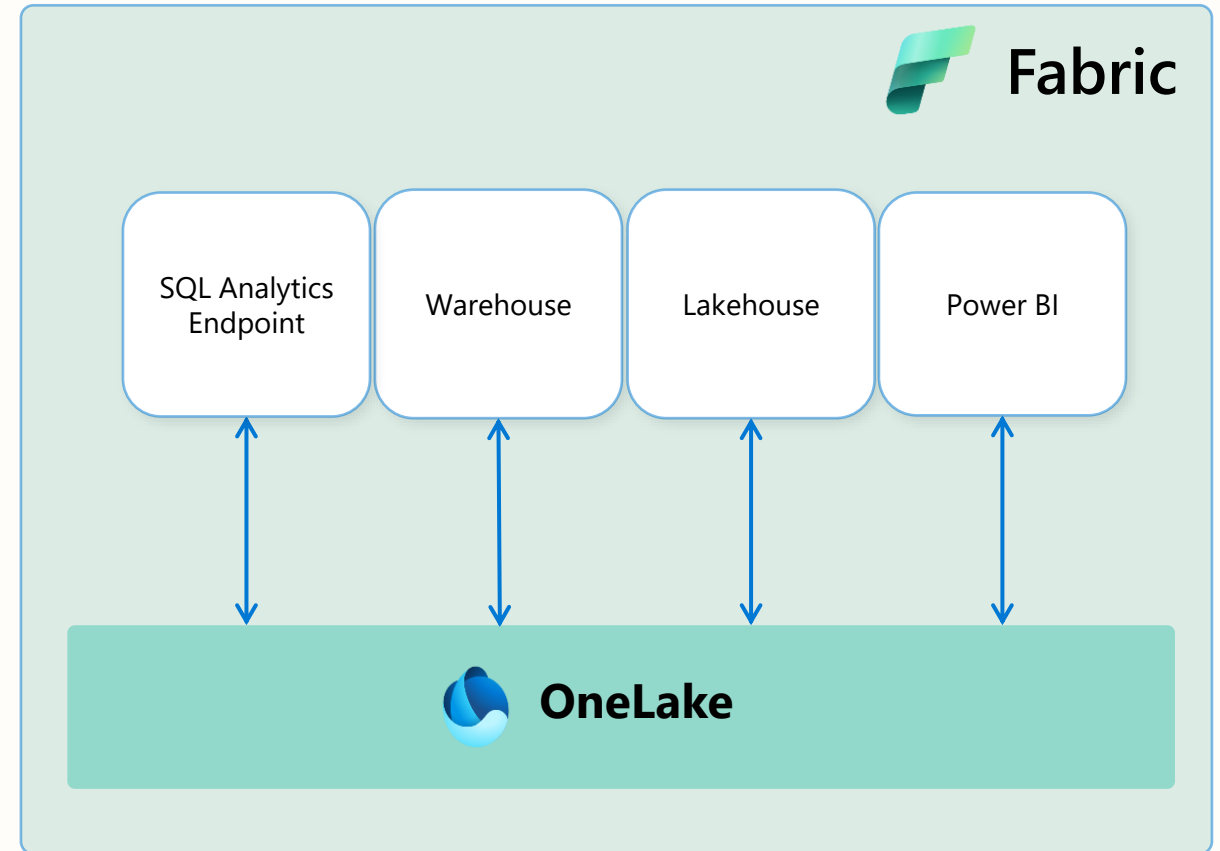

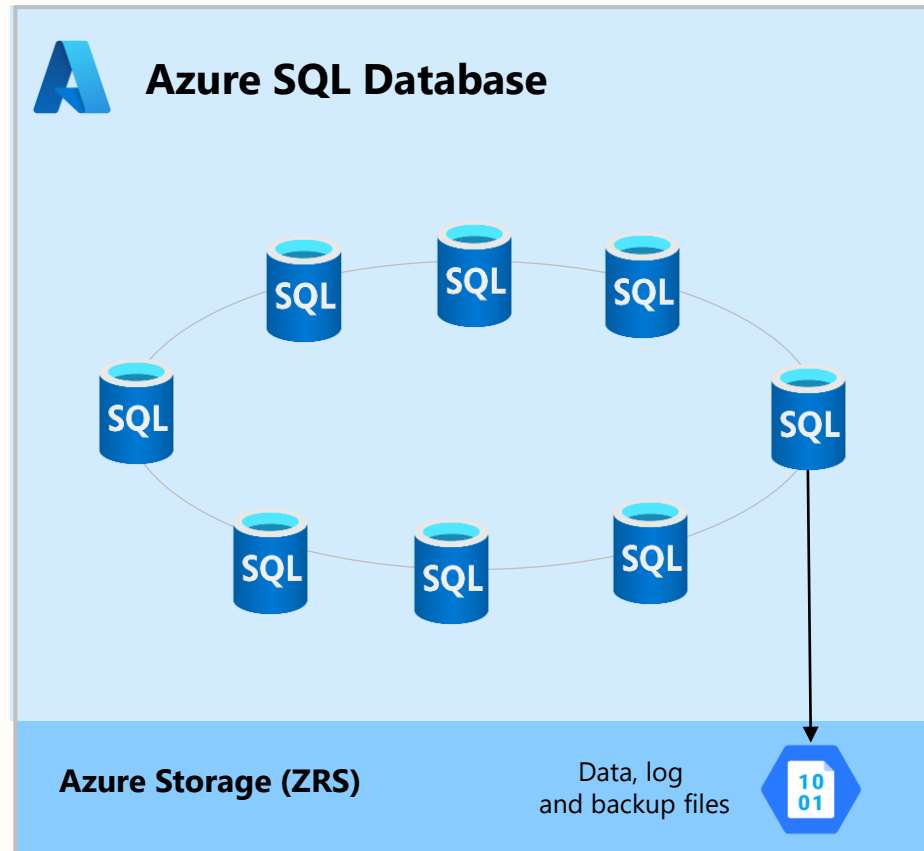

Solution

SQL database in Fabric enables you to get the best security, availability, and performance configurations

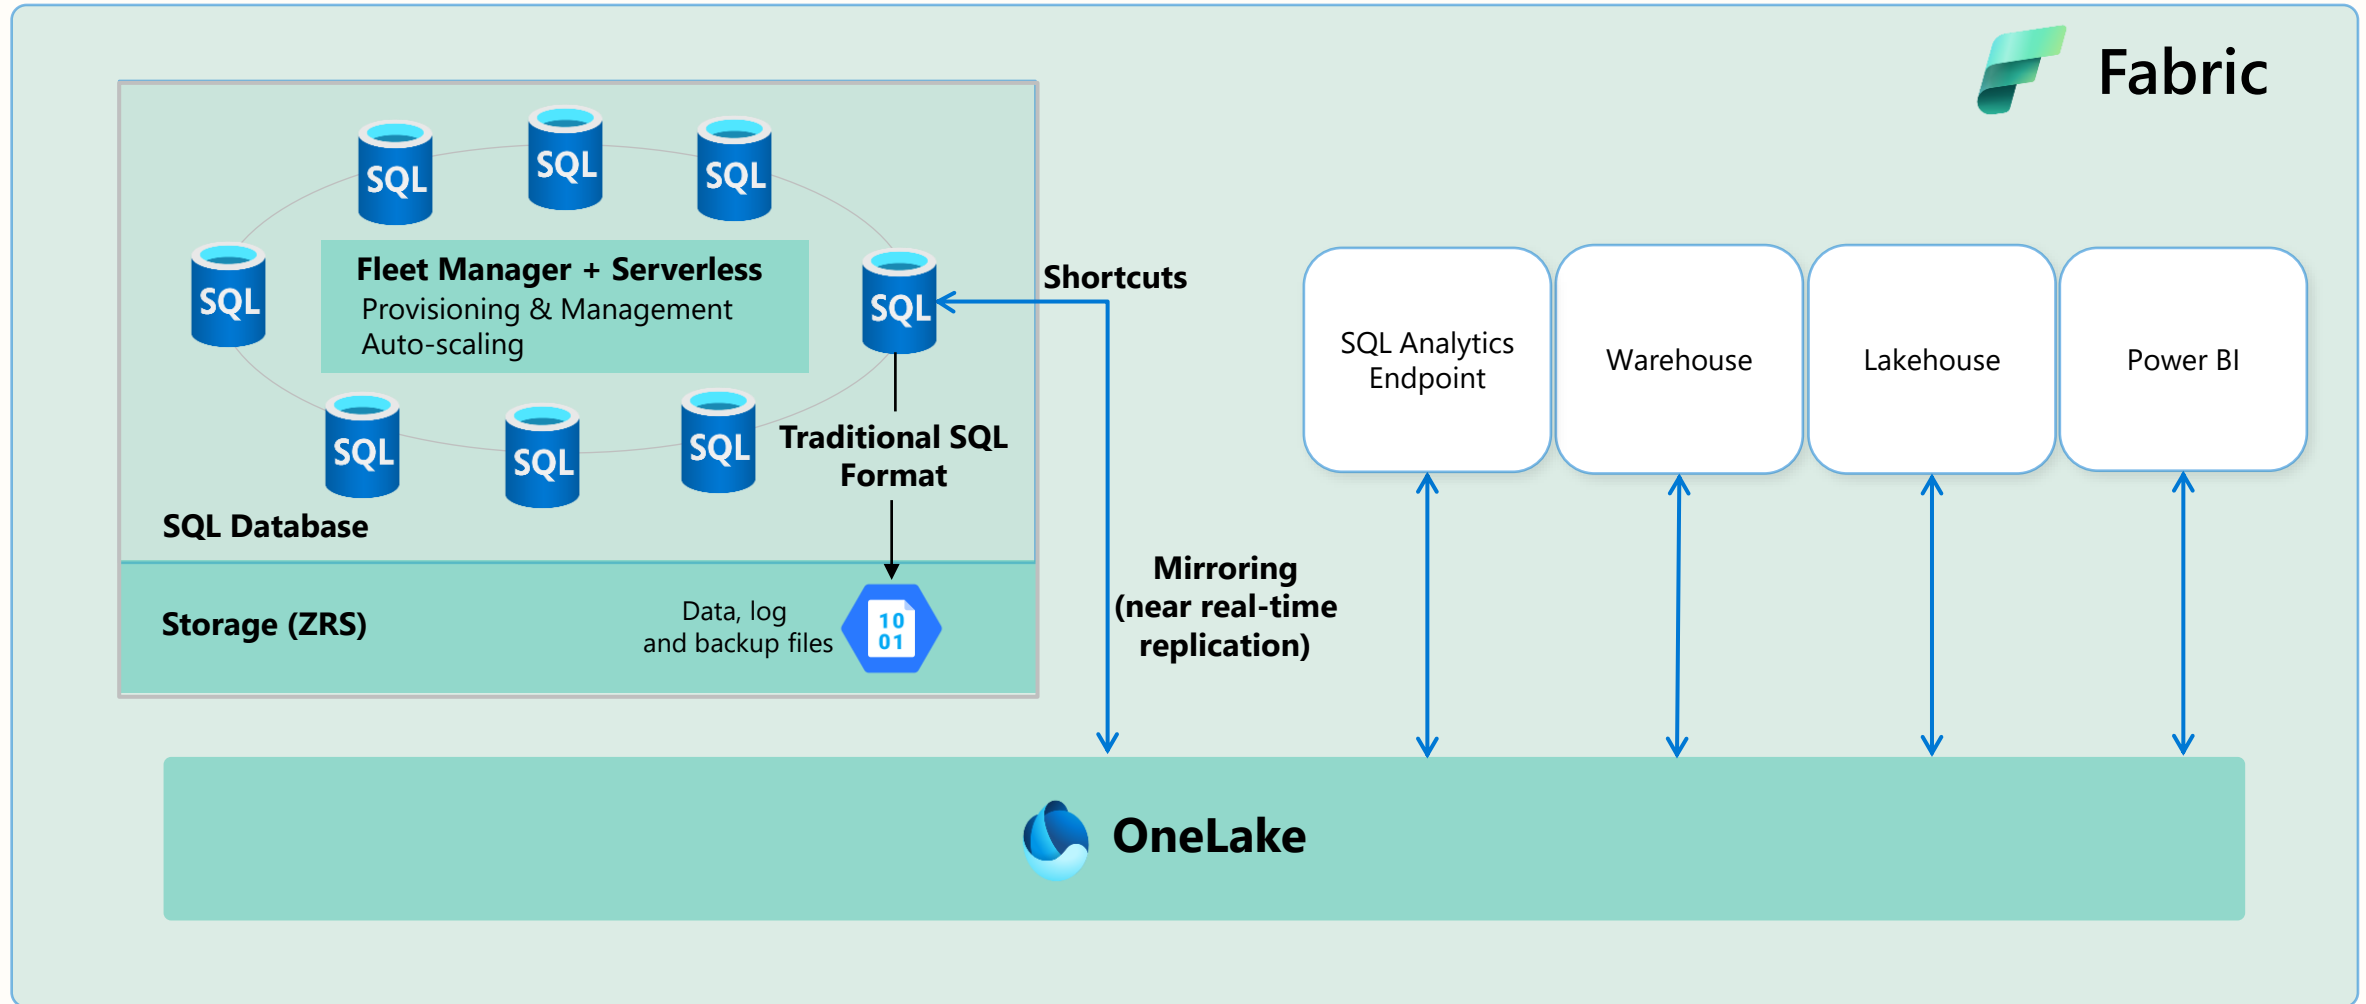

- Secure by default
- Auto-managed HADR
- Auto-scaling and auto-optimized

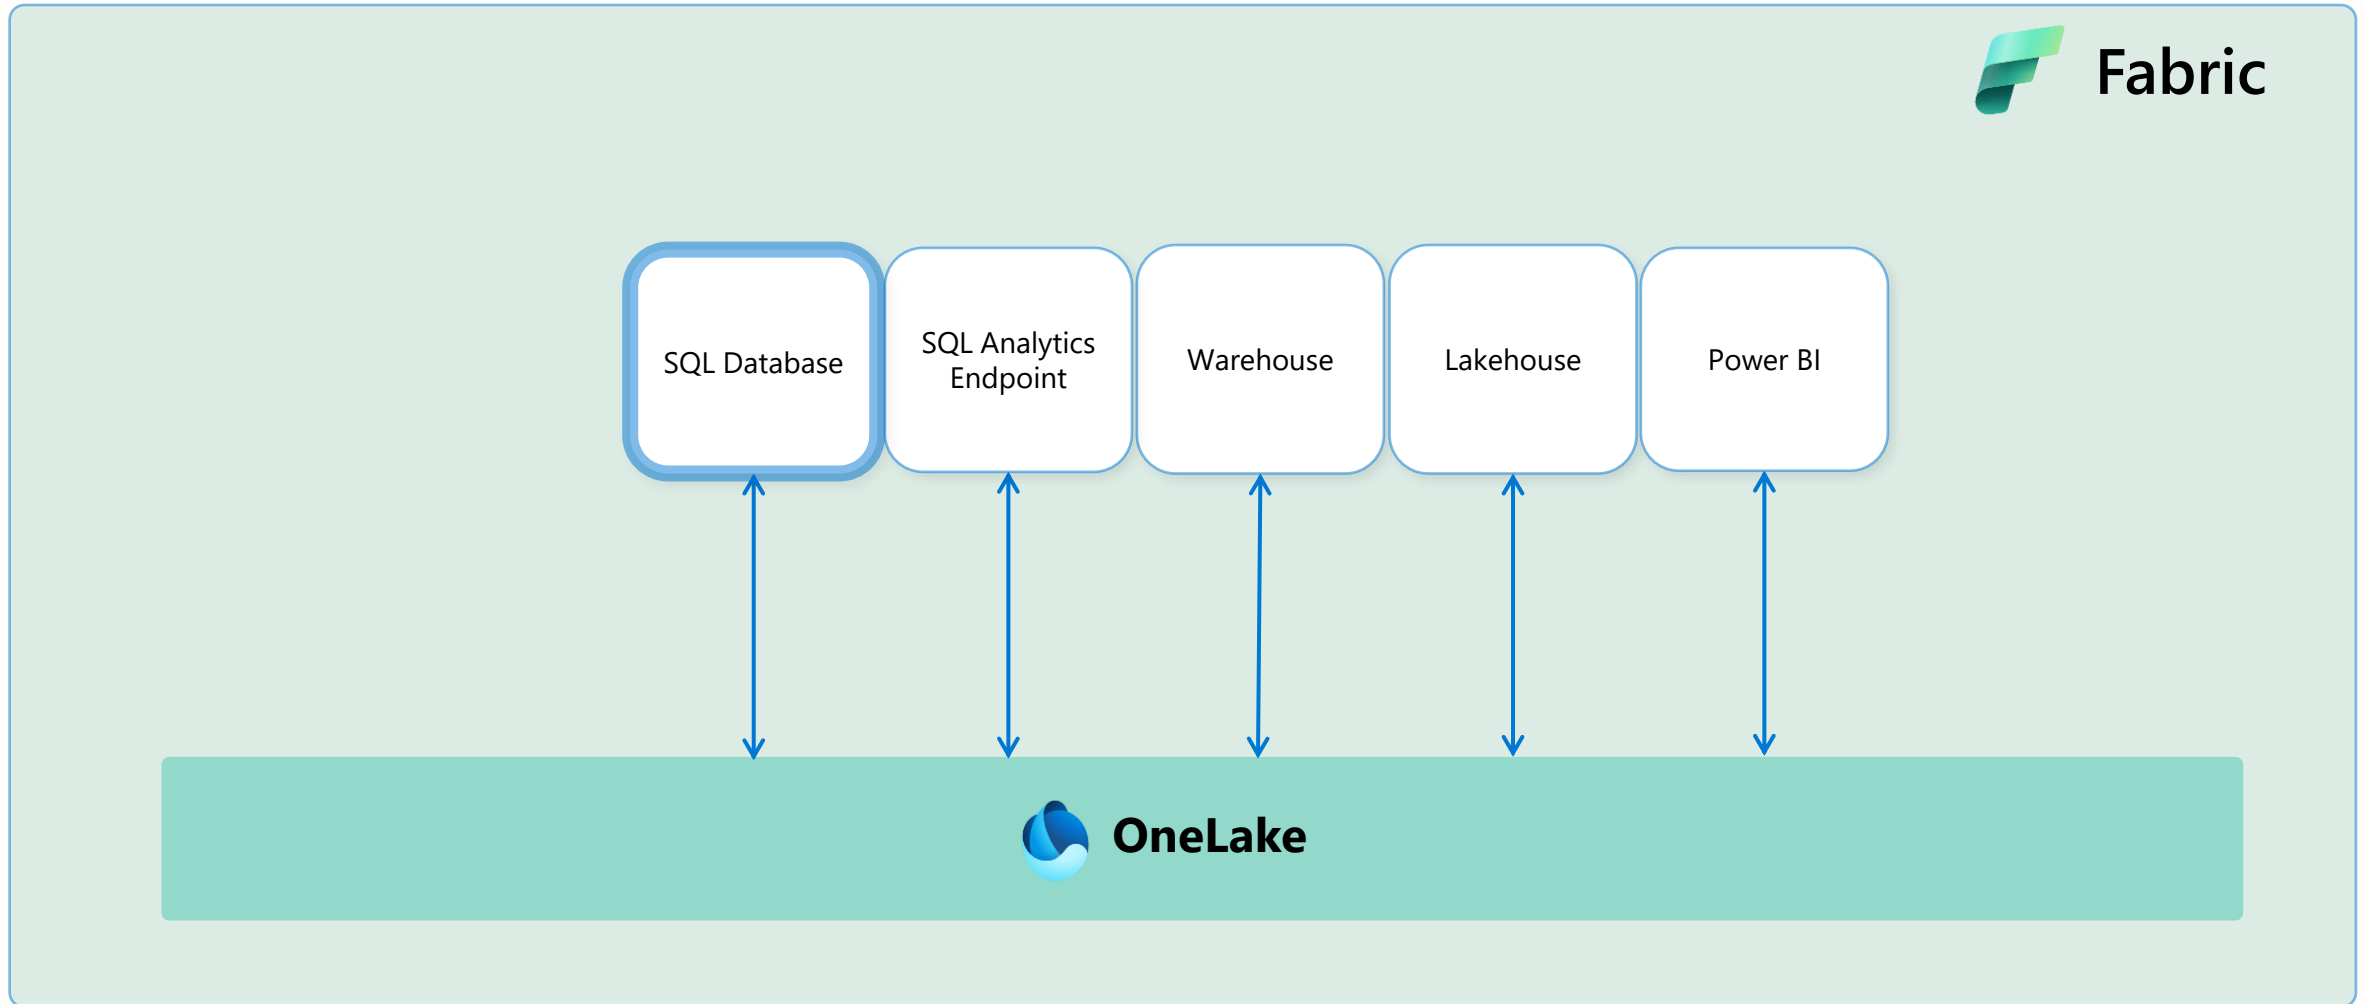

Architecture

Architecture

Architecture

Secure and governed by default

Authentication

Microsoft Entra authentication *only*

- Central identity management
- Password-less authentication

Authorization

Workspace roles and item permissions for easy management

Proven SQL native features for granular access control

Network security

Private link-ready

All data encrypted in transit - TLS 1.2

Data encryption

All data encrypted at rest

Customer Managed Key support*

Auditing*

Enabled by default and customizable

Central governance

Microsoft Purview sensitivity labels

Centrally-managed protection policies

Autonomous

- Auto-scaling compute and storage
- Auto-HA with Zone Redundancy
- Secured and governed by default
- Auto-replicated to OneLake (no ETL)
- Auto-indexing
- Latest Intelligent Query Processing enhancements
- Auto-backups, point-in-time restore available
- Auto-patching

SQL database in Fabric improves your data estate

"Fabric SQL Databases help us improve our data estate in 3 ways:

1. Simplification

App Devs can leverage databases natively out of Fabric. This allows us to take advantage of data mirroring automatically to OneLake out of the box, making less work for developers to better innovate on behalf of our clients.

2. Minimizing Data Duplication

Aon is in the business of better decisions and by having Fabric control the data loads between Transactional and Analytic workloads, it minimizes any unnecessary data duplication that may happen to support both App Dev and Analytical scenarios.

3. Improving Performance

Fabric SQL Databases offer a hands-off approach to monitoring and scaling with how it consumes against virtual compute in the Fabric Capacity. The maintenance time to look at and maintain these simplifies allowing Aon to quickly adjust to market conditions and leverage leading tech."

Boby Azarbod

Data Practice Lead and Data Architect at Aon

Optimized for AI

Build AI apps with SQL database in Fabric

- Vector and RAG support
- Call models with REST support
- Integration with Azure AI services
- Integration with popular frameworks, like LangChain and Semantic Kernel

Building scalable AI applications

Semantic Search

Store vectors and data together for consistency and Search for most relevant data

RAG Pattern

Retrieve the most semantically relevant data from your database and use it to ground LLMs for specific scenarios.

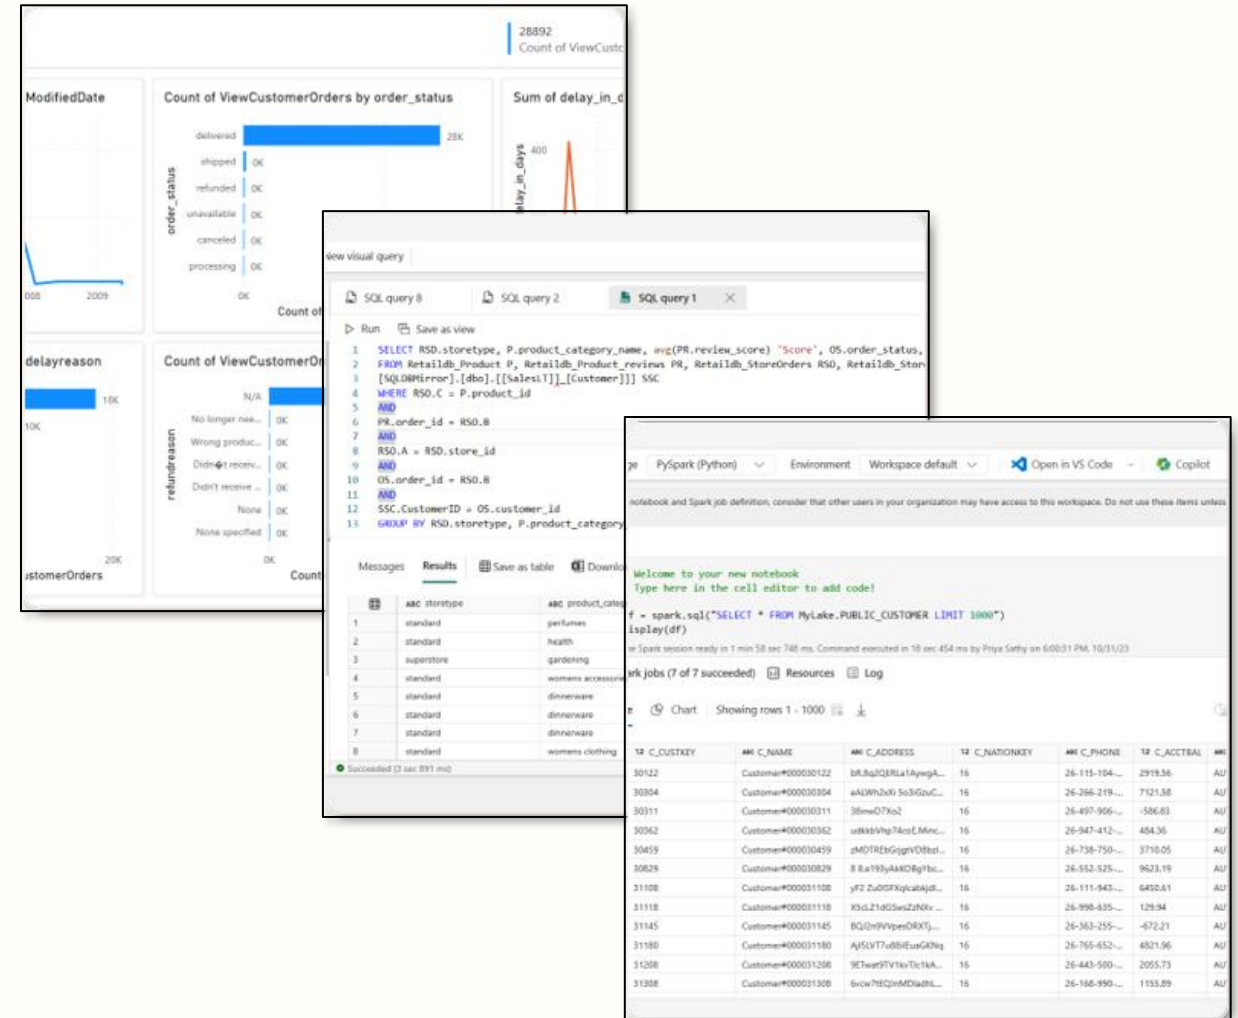

Structured Queries

Allow LLMs to query structured data and take advantage of rich metadata and query optimization

Replication to OneLake: insights unlocked

Near real-time replication to Delta makes for seamless integration with Fabric

- Power BI Direct Lake mode
- Cross-database querying with multi-cloud shortcuts
- Data Science experiences with notebooks
- Integration with AI skills (coming soon)
- Data activator and Real-Time Intelligence

Contoso Wireless is a pioneering telecom leader, offering cutting-edge wireless devices, accessories, and services designed for tech enthusiasts and modern professionals.

Our innovative products provide seamless connectivity, immersive audio experiences, and intelligent smart home integrations, redefining the way you connect and interact with the world around you.

Services

Discover the ultimate connectivity experience with Contoso Wireless Services. Whether you're streaming your favorite shows, video chatting with loved ones, or navigating new destinations, our innovative services keep you seamlessly connected at every moment. With lightning-fast speeds, unmatched reliability, and coverage that spans farther than ever, you have the freedom to explore, create, and share without limits. Join the revolution of effortless communication and elevate your digital lifestyle with Contoso Wireless — your gateway to a world without boundaries.

Phones

Elevate your everyday with Contoso Wireless' stunning range of phones—where technology meets imagination. Unlock brilliance in every tap with our innovatively designed smartphones that blend cutting-edge features with sleek aesthetics. From capturing magical moments with AI-powered cameras to experiencing lightning-fast connectivity, our phones are crafted to enhance your unique lifestyle. Whether you're a tech-savvy trendsetter or a functionality-focused professional, discover devices that cater to every need and style. Dive into a world where performance and design converge, and let your phone be an extension of your personality. Unleash the power of innovation in your hands today!

Prerequisites Check

Prerequisites

- **PowerBI Account:** [Power BI Sign in](#). You will need a PowerBI account with existing Fabric capacity.
- **Enable SQL database in Your Fabric Tenant Settings:** [Instructions to enable SQL database in Microsoft Fabric](#).
- **Microsoft Azure Account:** This workshop uses the [Microsoft Azure](#) platform to host the Azure OpenAI model we will use.
- **VS Code:** Install [Visual Studio Code](#) and the [SQL Database Projects extension](#).
- **.NET 8 SDK:** Install the [.NET 8 SDK](#).
- **Node.js:** Install [Node.js](#).
- **git source control repository:** You will need access to an empty git repository in Azure DevOps or GitHub
 - **Azure DevOps:** [Azure DevOps](#) using same work account as Microsoft Fabric
 - **GitHub:** [GitHub](#) requires enabling [GitHub integration in Microsoft Fabric settings](#)
